It currently consists of 1 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be presented.
                                                                                                                                                                                                                                                                                                                                    Similarity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NOTE: This is a 'working draft' sequence. It currently consists of 22 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence

It currently consists of 18 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                 NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                              arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                     as soon as it is available and the be preserved.

NOTE: This is a 'working draft' sequence. It currently consists of 65 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    NOTE: Estimated insert size may differ from sequence length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (bases 1 to 160483)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NOTE: This record contains 76 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         will be sequenced to completion. In the event th
the record is updated, the accession number will

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              * NOTE: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 62 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The OR's specifically recognise molecules, odourants, that elicit specific specifically recognise molecules, odourants, that elicit specific specificatory sensation. The human olfactory receptors and polynucleotides encoding them are useful for screening a library of chemical compounds encoding them are involved in olfactory sensation. Modulators of their activity are useful for pharmacological and genetic modulation of olfactory signalling pathways. Therefore, they can be used in the food, olfactory signalling pathways. Therefore, they can be dours and pharmaceutical and cosmetic industries to customise odours and fragrances. The present sequence encodes a human olfactory receptor of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acids encoding human olfactory G protein-coupled receptors, useful for screening for compounds involved in olfactory sensation, where the compounds can be used in the food, pharmaceutical and cosmetic industries to customise odours -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Qy
The present sequence is one of a number of isolated polynucleotides which encode polypeptides involved in olfactory sensation. The which encode polypeptides can be used in screening for olfactory agonists and polynucleotides can be used in screening for olfactory agonists and tagonists. The methods allow for the determination of primary scents and the identification of the odour receptors used to detect secondary scents and the identification of combinations of odour receptors that are involved in detecting such secondary scents. The receptors that are involved in detecting such secondary scents as scent fingerprint or scent profile), which may be used to re-create a scent fingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for and edit scents. Libraries of olfactory receptors are useful for the receptor of the profile of the scent profile of the sce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; olfactory receptor; OR;

```

The invention relates to Human G-protein coupled receptor (GPC polypeptides, designated NOV1-12, nucleic acids encoding them, variants of them, a vector containing the nucleic acid, a host containing the vector, a method for identifying modulators of

(GPCR) host

of the

GPCRs

```
cc and antibodies raised against them. The NOVI-12 polypeptides and nucleic cc acids are used to identify ligands and ant/agonists, they are also used cc to diagnose and treat GPCR-associated diseases, e.g. cardiomyopathy, cc atherosclerosis, diseases related to cell-signalling or metabolic catherosclerosis, diseases related to reprotozoal infections, pain, cc pathways, bacterial, viral, fungal or protozoal infections, pain, cc Alzheimer's diseases) stroke, multiple sclerosis, lesional cc psoriatic skin, ischaemia, cirrhotic hepatitis, acute pancreatitis, cd disbetes, cancer, anglogenesis, obesity, also disorders of olfactory cf function. The nucleic acids can be used as marker for chromosome 11, cc therapeutically, including as antisense or ribozyme sequences, to prepare transgenic animals, as sources of primers and probes (e.g. for transgenic animals, as sources of primers and probes (e.g. for therapy, and for tissue typing. The present sequence encodes human NoV6.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    923
                                                                                           The invention relates to nucleic acids encoding human olfactory receptors, OR, (a G protein-coupled receptor, GPCR). The OR's specifically recognise molecules, odourants, that elicit specific specificatory sensation. The human olfactory receptors and polynucleotides encoding them are useful for screening a library of chemical compounds encoding them are useful for paramacoustic modulations of their activity are useful for pharmacoustal and genetic modulation of their activity are useful for pharmacoustal and genetic modulation of olfactory signalling pathways. Therefore, they can be used in the food, olfactory signalling pathways inherefore, they can be dours and pharmaceutical and cosmetic industries to customise odours and fragrances. The present sequence encodes a human olfactory receptor of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    13-MAR-2001; 2001WO-US07771.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            20-SEP-2001.

preventing and of cardiovascular, Novel isolated human G-protein coupled receptor useful for diagnosing, treating cell proliferative, neurological, gastrointestinal, autoimmune/inflammatory and metaboli. and metabolic

Claim 5; Page 133; 138pp; English.

CC CDNA. The present sequence is human G-protein coupled receptor-9 (GCREC-9)
CC cDNA. The present invention relates to GCREC protein and nucleic acids
CC colon, The present invention relates to GCREC protein and nucleic acids
CC concerning diseases or conditions associated with decreased expression
CC or overexpression of functional GCREC in a patient, where the disorder
CC is selected from cell proliferative disorders such as actinic keratosis,
CC concer, neurological disorders such as epilepsy, stroke, Alzheimer's
CC disease, Huntington's disease, Parkinson's disease, cardiovascular
CC disease, Huntington's disease, Parkinson's disease, cardiovascular
CC disorders such as hypertension, vasculitis, varicose veins, gastroCC intestinal disorders such as dysphagia, dyspepsia, anorexia, nausea,
CC uveitis, autoimmune/inflammatory disorders such as acquired
CC infections, trauma and metabolic disorders such as diabetes, obesity,
CC osteoporosis. GCREC proteins and their CDNAs are used to assess the
CC effects of exogenous compounds on the expression of GCREC sequences.
CC GCREC CDNA is useful to create knock in humanised animals (pigs) or
CC therapeutic or diagnostic purposes, for somatic or germline gene
CC therapy, to generate hybridisation probes useful in mapping the
CC techniques

                                                                                                                                                                                The present sequence is one of a number of isolated polynucleotides which encode polypeptides involved in olfactory sensation. The polynucleotides can be used in screening for olfactory agonists and polynucleotides can be used in screening for olfactory agonists and polynucleotides allow for the determination of primary scents and the identification of the odour receptors used to detect these primary scents. The methods also enable determination of secondary scents and the identification of combinations of odour secondary scents are involved in detecting such secondary scents. This enables the construction of a scent representation (also called this enables the construction of a scent representation (also called a scent ingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptors, and can be used for determining differences in the olfactory faculties of alfactory invalvance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; olfactory receptor; OR; primary scent determination; secondary scent determination; polypeptide library; odour receptor; scent profile; scent fingerprint; scent representation; ds.
